A patient enters the hospital thinking of it as a place where all his ailments will end and that he/she will return back home bouncing back to life again. But it is a bitter fact that today many patients can get infections in hospital while they are being treated for some ailment. These infections can have devastating emotional, financial and medical effects. Worst of all they can be deadly. Preventing health care infections is a challenge for hospitals today. If all the members of the health care team adhere to correct infection control and prevention practices, then we can minimize or prevent the risk of transmission of infections to our patients, our visitors and our staff.

#### OBJECTIVES OF THIS SEMINAR:

- Understand all the elements of an HCAI programme
- Learn about difficult to implement components of the HCAI programme
